DETAILED ACTION

New Arguments

Claim Objections

4. Claim 24 contains the trademark/trade name Syntex. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe a type of adjuvant and, accordingly, the identification/description is indefinite.

Claim Rejections - 35 USC § 112, 1st paragraph

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claims 21-26 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. THIS IS A NEW MATTER REJECTION. Claims are drawn to a method of treating a B-cell lymphoma comprising the administration to a B-cell lymphoma patient a multivalent composition comprising at least two recombinant heavy chain variable regions of a immunoglobulin molecule derived from said patient's B-cell lymphoma cells, wherein the two recombinant heavy chain variable regions differ by at least one idiotope. The specification as originally filed does not have support for the limitation of a method of treating a B-cell lymphoma with a multivalent composition comprising at least two recombinant "**heavy chain**" variable regions. The specification has only disclosed a multivalent composition comprising at least two variable regions. Applicant is invited to point to clear support or specific examples of the claimed limitation in the specification as-filed or remove such amendatory language in response to this office action.

It is also noted that the instantly filed application is a divisional of US application number 09/370,453 filed 8/9/1999, which is a divisional of US application number

Art Unit: 1642

08/761,277 filed 12/06/1996 (now US Patent 5,972,334) which is a continuation-in-part of US application number 08/644664 (no US Patent 5,776,746). Because the claimed limitation of "heavy chain" is not found in either one of the earlier filed specifications (i.e. the divisionals), for prior art purposes, the instant application will be afforded the filing date of 8/9/2001, which is the filing date of the instant application.

All other rejections are withdrawn in view of the applicant's amendments and arguments thereto as set forth in the Paper filed 10/20/2003.
